
Supplementary Figure 4. Shortening effect of substituting the top minimum maximum endurance time (mini-MET) feature Mechanical power normalized by dynamic compliance with driving pressure on median survival time. The minimum node was set to 20. Driving pressure (DP) 12 cm H_2O (P <0.001) and albumin 2.3 g/dl (P=0.004) were identified as the main factors influencing mini-MET.
