
Supplementary Figure 6. Comparison of achieved features (driving pressure [DP] and albumin) among survival curves. Node 3=DP ≤12 cm H_2O and albumin ≤2.3 g/dl; Node 4=DP ≤12 cm H_2O and albumin >2.3 g/dl; Node 5=DP >12 cm H_2O. Time origin was defined as the start of the spontaneous breathing trial (ventilator discontinuation and switching to T-tube). MST: median survival time.
