

Supplementary Table 1. Results of univariable logistic regression with restricted cubic splines for 1-year mortality after postoperative admission to the intensive care unit

Variable	All patients			Noncardiovascular surgery			Cardiovascular surgery		
	Coefficient	SE	P-value	Coefficient	SE	P-value	Coefficient	SE	P-value
Body temperature ^a									
Linear ($\leq 36.6^\circ\text{C}$)	-0.539	0.091	<0.001	-0.628	0.109	<0.001	-0.341	0.150	0.023
Spline ($\geq 36.6^\circ\text{C}$)	0.799	0.106	<0.001	0.909	0.120	<0.001	-0.157	0.421	0.710

SE: standard error.

^aBody temperature was defined as the first temperature measured using a digital axillary thermometer within 5 minutes of entry into the intensive care unit.
