

Supplementary Fig. 1. IκBα expression after vasopressin and vasopressin receptor antagonist (Tolvaptan) treatment with/without LPS by Western blotting. IκBα expression was decreased in LPS-induced in RAW 264.7, and pretreatment with AVP inhibited IκBα degradation. When tolvaptan 0, 50 100 nM was applied for 3 hours after pretreated AVP in LPS-induced in RAW 264.7 cells, effect of AVP was gradually disappeared.
